# Nursing Clinical Skills Training & Mentorship

Customized Nursing Mentorship & Simulation · Trillium Vocational Institute

**Strengthen your skills. Build your confidence. Enhance your clinical readiness.**

Our nursing training and mentorship sessions provide hands-on practice, guided learning, and scenario-based education tailored to each learner's experience, professional goals, and clinical setting.

Training areas may include:

## Clinical Assessment, Documentation & Communication

- Head-to-toe and focused system assessments
- Vital signs, oxygenation, blood glucose, and pain assessment
- Mental status and cognitive screening
- Recognizing patient deterioration and prioritizing care
- Clinical documentation, SBAR communication, handover, and escalation

## IV Therapy, Medication Administration & Vascular Access

- Peripheral IV skills, maintenance, and troubleshooting
- Medication administration principles and infusion pump fundamentals
- Injection techniques, blood collection, and venipuncture basics
- Central line and PICC line care
- Blood transfusion principles and monitoring

## Catheterization, Wound Care & Infection Prevention

- Urinary catheterization and catheter care
- Wound assessment, dressing changes, and skin integrity
- Ostomy care and troubleshooting
- Personal protective equipment, aseptic technique, and sterile-field principles

## Enteral Feeding & Gastrointestinal Care

- Simulation-based nasogastric tube training
- NG tube care and medication administration principles
- Gastrostomy tube care and feeding
- Enteral feeding setup, monitoring, and complication recognition

## Acute Care Readiness & Emergency Foundations

- Code Blue roles and response fundamentals
- Recognition and initial response to seizures, stroke, myocardial infarction, hypoglycemia, shock, and respiratory distress
- Patient deterioration recognition and clinical prioritization

## Clinical Judgment & Professional Confidence

- Critical thinking and clinical decision-making
- Understanding the rationale behind clinical procedures
- Scenario-based practice and simulation
- Communication, confidence, and professional readiness

Training content is customized according to learner experience, learning objectives, and the intended clinical context. Invasive procedures and higher-risk skills are addressed through appropriate simulation, supervision, and competency-based instruction.
